

## Clinicians See Clearly Now

See through to the earliest signs of infections with 3M™ Tegaderm™ CHG (Chlorhexidine Gluconate) IV Securement Dressing. Available in two sizes, the transparent dressing, impregnated with an antimicrobial gel pad, helps to protect patients from central line infection, and secures catheters and percutaneous devices.

## Simply Safer

Easy to apply, Tegaderm CHG dressing features one-step application approach, reducing application steps and minimizing the possibility of application errors, enhancing user confidence.

## Overall Protection

Covering a large surface area, Tegaderm CHG dressings provide antimicrobial protection at both insertion and suture sites. Recognized as an emerging trend for preventing central line infections, Tegaderm CHG impregnated dressings should be considered by hospitals looking for ways to help achieve a zero hospital-acquired infection rate.
